# CSV Parser

Create web application to parse a plain CSV file and display its content using the grid table.

Use case:

1. User uploads file to the server using the Upload file control.
2. User clicks on the View button.
3. System renders the content of the file in the grid view (see sc.1.)
   a. If user checks the "Header in first row" checkbox - system should add a header to the grid using the first row of the file.

Sc.1.

Estimate: 8-10 hours.

Notes:

1. Using of Angular 2+ as the UI will be a huge plus.
2. Adding 'order by', 'filter by' and pagination features to the grid will be a plus.
